- b) Uniform standard stack pattern (30 ft × 20 ft) should be followed. No stack should be Constructed more than 20 layers high and should not contain more than 150 MT rice.
- c) Stacks should be built up in a scientific manner so that alleyways and gangways are maintained. Alley ways maintained in between stack to stack and stack to wall is 2.5 ft. Gang ways i.e. 5 ft. Wide space is to be left for free access of labour.

During storing period:

During storing period, the godown should be opened daily for proper aeration of the stocks except in rainy & high moist days to dissipate heat given out by respiratory action of the grains and to change the ecology in order to disturb the insect growth & development. The stocks should be brushed properly at least once in each week. The stocks should be classified once in each fortnight to verify the intensity of infestation by pests and chemical treatment should be arranged accordingly.

Classification is explained in terms of 'Clear', 'Few' and 'Heavy' depending upon the number of live insects noticed in 500 gms. Of representative sample drawn from the peripheral layer of a stack. Sampling has to be done covering all sides of a stack in a cross manner.

TABLE -1

Classification	No. of Insect present
Clear	Indicates the presence of no live insects (major or minor) per 500 gm of representative sample drawn
Few	Presence of live insects (major or minor) up to two in number per 500 gm of representative sample drawn
Heavy	The live insects major or minor are more than two per 500 gm of representative sample drawn

- b) The stocks should be sprayed with Malathion 50% EC solution (Dilution 1:100 ratio) once in each fortnight. Three litres of such solution should be sprayed over 100 square meter surface area.

- c) If the intensity of infestation is heavy, the stock must be sprayed with Deltamethrin 2.5% WP solution (120 gms to be dissolved in 3 litre water and be sprayed over 100 square meter surface area) once in three months.
- d) If the stocks are heavily infested with pests including khapra, the same must be fumigated with Aluminium phosphide tablets (9 gms per MT) by covering the stacks with polythene covers once in three months. After polythene cover the stacks are made air tight by the mud plastering/ Sand Snake (double row) to retain maximum of the gas molecules liberate. The fumigated covers should be removed after 5 to 7 days.
- e) After chemical treatment as aforesaid, the bags of rice should be brushed properly. In case of treatment with Deltamethrin 2.5 % WP the stock should be brushed only before delivery.
- f) Alleways, gangways should be cleaned properly and loose grains should be refilled in gunny bags. Empty gunny register must be kept in the godown to write down the number of empty gunny used in refilling of loose grains.
- g) Stack cards in each stack should be properly maintained and displayed in each stack indicating therein the date of arrival of stocks nature of date wise treatment done.
- h) Stack wise categorization must be made once in a fortnight and categorization register should be maintained.

Categorization: It is a method to assess the quality in order to plan for early liquidation of food grains during storage. Rice is categorized as A, B, C & D based on the percentage of damaged and discoloured grains present. The percentages of damaged & discoloured grains limits in rice are decided by analysis (Weight). It is stated that the representative samples (500 gm) to be obtained from each stack of rice and from such samples, representative samples of 20(twenty) grams as per BIS method of analysis: IS:4333(Part I) – 1967, to be scooped out for analysis of damaged & discoloured grain of rice. The samples will be categorized as A,B,C and D in terms of percentage of damaged and discoloured grains present in the 20(twenty) grams of representative samples as per following table:

TABLE-2

Commodity (Rice)	Category	Percentage of damaged grain	Percentage of discoloured grain	Remarks
Parboiled/ Raw	A	Up to 3 %	Up to 3%	Issuable stock for delivery
Parboiled/ Raw	B	Above 3% up to 4%	Above 3% up to 5%	Issuable stock for delivery
Parboiled/ Raw	C	Above 4% up to 5%	Above 5% up to 7%	Issuable stock for delivery
Parboiled/ Raw	D	Stock shows appreciable quantity of loose bran (more than 5%) or giving unpleasant smell.		Non-issuable for delivery

- j) In case of presence of rodents, rodent control measures to be undertaken.

Job description towards disinfestations treatment of stored stocks**A. Prophylactic treatment: The stored stocks of rice should be treated as follows:-**

Name of pesticides	Dosage	Remarks
1. Malathion 50% EC	Solution to be prepared in the ratio (1:100) and prepared solution be sprayed on bags surface, walls, alleyways of godown @ 3ltr./100 sq. mtr. to control insects and avoid infestation.	To be treated once in every fortnight. Bags of food grains should be brushed and cleaned and alleyways also should be cleaned after exposure of treatment.
2. Deltamethrin 2.5% WP	40 grams of Deltamethrin 2.5 % WP has to be dissolved in 1 ltr. Of water and 3 ltrs. Of solution to be sprayed on bags surface, walls, alleyways over 100 sq. mtr. surface area.	Once in 90 days. Bags of food grains should be brushed and cleaned and alleyways also should be cleaned after exposure of treatment.

B. Curative control measures (Fumigation):

If huge infestation is observed and not eliminated by Prophylactic Control measures, Curative Control measures i.e. fumigation of the stocks must be undertaken to eliminate living pests so that at the time of delivery of stocks of rice/wheat etc. there remain no living pests.

Name of pesticides	Dosage	Remarks
Aluminium Phosphide	3 tablets i.e. 9 grams of Aluminium Phosphide to be used per MT. Of stored stocks after proper covering of stocks of food grains with airtight polythene covers. The exposure period is 5 to 7 days.	After exposure time cover should be removed and food grain bags should be brushed and cleaned.

After Fumigation is carried out, it should be noticed if there are any crawling insects on the top of stacks or on sides, if fumigated under gas proof cover it should be presumed that the fumigation operation has not been successful. The cause should be looked into and avoided for future operation and stocks should be fumigated again and after exposure period, the bags and the stacks should be cleaned and brushed thoroughly to remove ash and dead pest and stocks should be sprayed with Deltamethrin or with Malathion (in case of crawling infestation) to eliminate the chances of any living pests.

C. Rodent control:

Normally, foodgrain storage warehouses/ godowns have been designed and constructed in such a fashion that there are minimum chance of rodent infestation. However, if presence of rodents is noticed, rodent control measures must be undertaken by using rodenticides. Zinc Phosphide, Berium Carbonade, Red squill and ANTU are some of the compounds which have been/are being used as rat poisons.

D. Classification of stocks of food grains:

Prior to disinfestations measures, stocks of food grains stored in the godown must be classified as follows:-

Classification	No. of living Pests
Clear	Stock completely free from any living pests.
Few	Stock having two living pests per 500 grams of food grains of representative sample.
Heavy	Stock having more than 2 living pests in 500 grams of representative sample.

After classification, following disinfestations treatment of to be undertaken :

- In case of stocks classified as 'clear', spraying with Malathion 50 % EC or Deltamethrin 2.5% WP is recommended.
- In case of 'few' classified stocks, spraying with either Deltamethrin 2.5% WP or cover fumigation with Aluminium Phosphide is recommended.
- In case of 'heavy' classified stocks, spraying with either Deltamethrin 2.5% WP or cover fumigation with Aluminium Phosphide is recommended.
- After disinfestations treatment the stocks of food grains must be re-classified in order to assess whether disinfestations treatment has been properly undertaken or not and stocks of food grains are free from any living pests.
- Classification of stocks of food grains must be done once in each fortnight prior to treatment and after treatment and proper noting should be recorded in a 'Register'.
